

SWEETY KUMARI

sweetykumari0721@gmail.com | +91 8789579369 | Patna, Bihar

PROFILE

B.Tech Computer Science & Engineering student at VIT Bhopal University with a strong foundation in Python programming, machine learning model training, and AI-driven application development. Hands-on experience in building predictive ML models, stock sentiment analytics, and interactive web tools. Active community contributor and passionate problem solver in technical hackathons.

TECHNICAL SKILLS

Core Language:	Python (Primary Base)
Machine Learning:	Scikit-Learn, PyTorch / TensorFlow, Model Training & Evaluation, Sentiment Analysis, NLP, Matplotlib
Programming:	Python, C++, Java, SQL
Frontend:	React, JS, CSS
Developer Tools:	Git, GitHub, VS Code, Jupyter Notebooks

PROJECTS

Faultline | Community & Feedback Platform

- Engineered a platform for entrepreneurs, students, and startup founders to document and share rejected ideas, pitch failures, and post-mortem insights.
- Built interactive discussion and feedback features allowing peers and mentors to offer constructive critiques on public pitch failures.

AI-Driven Stock Market Sentiment Analyser | NLP & ML Pipeline

- Developed an end-to-end sentiment analysis pipeline in Python processing market news, financial updates, and social sentiment to gauge market trends.
- Applied Natural Language Processing (NLP) pre-processing techniques and trained machine learning classification models to evaluate bullish and bearish market indicators.

Word Hanger & Interactive Games | Game Development

- Designed and implemented interactive games including "Word Hanger" (a classic word-guessing game) emphasizing clean game logic and dynamic state handling.
- Focused on intuitive visual feedback, user engagement, and responsive interfaces.

AI-Powered Study Time Predictor | Machine Learning

Mar 2026

- Built an intelligent study planner predicting required study hours based on topic difficulty, prior knowledge, remaining time, and distraction levels.
- Trained regression models using Python and Scikit-Learn; integrated Matplotlib for visual time-allocation analytics.

Agentic AI for Zero Trust IoT Security | AI Security Research

Jan 2026 – Feb 2026

- Explored an autonomous, reasoning security agent designed to dynamically evaluate threat patterns rather than depending solely on static firewall rules.

Responsive Personal Portfolio & Web Applications | Frontend

- Designed responsive, modular web interfaces using React, JS, and CSS, showcasing projects, skills, and interactive features.

EDUCATION

B.Tech in Computer Science & Engineering

2025 – 2029

VIT Bhopal University

LEADERSHIP & ACTIVITIES

- GSOC Innovators Club:** Active Core Member contributing to open technical workshops and innovation projects.

- **Vitronix Club, VIT Bhopal:** Core Programming Team member assisting in organizing coding events and technical sessions.
- **Hackathons & Seminars:** Led multi-member hackathon teams; actively participated in technical seminars on Blockchain Security and Artificial Intelligence.

INTERESTS

Python Development • Machine Learning Model Training • AI-Driven Applications • Game Logic & Interactive UI • Technical Hackathons
